Abstract: This digital assistant leverages advanced technology, including natural language processing, and AI-driven algorithms, to provide a personalized and interactive legal education experience. It serves as a virtual guide, offering information on various aspects of the law, explaining legal terminology in plain language, and simplifying complex legal processes. The Digital Assistant for Legal Awareness represents a significant step toward democratizing legal knowledge and access to justice. This digital assistant has the potential to enhance legal literacy and promote a more just and equitable society. Laws can be broadly categorized into various domains, including criminal law, civil law, environmental law, human rights law, and many more, each serving distinct purposes and addressing unique societal needs. They are crafted to safeguard individual liberties, regulate commerce, protect the environment, and establish standards of ethical conduct. In an increasingly complex and dynamic legal landscape, access to legal information and awareness of one's rights and responsibilities are essential for individuals and communities to navigate their legal affairs effectively.

Keywords – Digital assistant, Nlp, Legal awareness, Human rights, criminal law.

I. INTRODUCTION

Revolutionary tools are designed to democratize access to legal knowledge and empower individuals with essential legal information. In an era characterized by rapid technological advancement, this digital assistant harnesses the power of artificial intelligence and natural language processing to provide user-friendly, readily accessible legal resources. It bridges the gap between the complexities of the legal world and the everyday person, offering comprehensive information on various legal topics, from family law to immigration and beyond. With its 24/7 availability, multilingual support, and personalized guidance, this digital assistant is poised to transform the way individuals interact with and understand the law, ensuring that justice is not just a privilege, but a fundamental right for all. One of the key strengths of this Chatbot lies in its extensive legal knowledge base, encompassing a wide array of legal topics ranging from family law and immigration to contracts and criminal law. Users can readily access explanations of legal terms, guidance on legal processes, and even personalized advice tailored to their unique situations. Furthermore, the Digital Assistant for Legal Awareness offers multilingual support, ensuring that users from diverse linguistic backgrounds can access vital legal information in their preferred language.

II. LITERATURE REVIEW

A comprehensive survey was conducted on existing literature and products to explore the research gaps. The survey included over 10 relevant papers, listed below, a literature survey explores the significance of legal awareness, its impact on various aspects of society, and the strategies used to enhance it. Legal awareness is closely linked to access to justice.

Ambika PR, et al.[1]. Legal awareness is crucial for individuals and businesses to navigate their rights, obligations and legal processes. However, access to legal information often remains limited due to complexity, language barriers, or cost. This paper presents the development of a chatbot designed to serve as a digital assistant for promoting legal awareness. The chatbot provides users with instant, user-friendly, and accurate legal information on various topics such as 4 as contracts, consumer rights, family law, and more. It leverages natural language

processing (NLP) to understand user queries and delivers responses in multiple languages, making it accessible to diverse populations. Additionally, the chatbot functions as a cost-effective, timesaving tool that democratizes legal knowledge by offering 24/7 support. Through this innovation, we aim to reduce the knowledge gap in legal matters and empower individuals to make informed decisions without the need for immediate professional legal consultation

Jeba Stanley, et al. [2]. This paper presents the development of a user-friendly digital assistant designed to provide legal information across various languages, making legal knowledge accessible to a broader audience. The assistant leverages natural language processing (NLP) and machine learning technologies to offer real-time responses to legal queries, covering a wide range of topics such as civil rights, contract law, and employment regulations. By addressing the challenges of legal jargon and linguistic barriers, the system ensures that users can obtain accurate and clear legal guidance, irrespective of their language proficiency. The platform is designed to be intuitive, allowing users with minimal legal background to interact seamlessly. Furthermore, the assistant prioritizes accessibility, promoting legal literacy and empowerment for individuals and small businesses globally. This paper discusses the system's architecture, language support features, and the potential societal impact of democratizing legal information through advanced technology.

Hilda Kanaga V, et al. [3]. Access to legal information and services remains a significant barrier for marginalized communities in India, where language, literacy, and socioeconomic factors often prevent individuals from seeking justice. The Digital Legal Aid Assistant aims to bridge this gap by offering a user-friendly platform that provides free, accessible legal information and guidance tailored to the specific needs of underserved populations. The platform supports multiple Indian languages and simplifies legal jargon, empowering users to understand their rights, navigate legal procedures, and access local legal aid resources. Designed with a mobile-first approach, it caters to rural and urban populations, offering offline functionality to ensure connectivity isn't a barrier. By leveraging technology, the assistant seeks to democratize legal aid, fostering greater legal literacy and ensuring that marginalized communities can better access justice and protections under the law. This project addresses the urgent need for inclusive legal solutions in India's diverse and complex landscape

Amisha Ajith al.[4]. This paper presents the development of a Legal Digital Assistant designed to enhance legal awareness and implement a Know Your Rights (KYR) framework tailored for India. With a focus on accessibility, this virtual assistant offers users personalized legal information in multiple Indian languages, simplifying complex legal concepts and addressing common legal queries. The assistant covers a broad range of legal topics, including fundamental rights, labor laws, consumer protection, and more, while ensuring that the information is userfriendly and accurate. The KYR framework is integrated to provide citizens with a clear understanding of their rights and responsibilities in various legal contexts. By leveraging natural language processing (NLP) and AI-driven technologies, the assistant empowers individuals to navigate India's legal landscape with confidence. This tool is particularly valuable in bridging the gap between legal professionals and the general public, fostering greater legal literacy and promoting equitable access to justice

Mahfuz Ashraf, et al.[5]. Legal awareness is crucial for empowering individuals and communities to protect their rights and access justice. In the age of digital transformation, Information and Communication Technology for Development (ICT4D) offers innovative ways to disseminate legal knowledge effectively. This paper explores how ICT4D can be harnessed to promote legal awareness, particularly in underprivileged or remote areas with limited access to traditional legal resources. By leveraging mobile applications, online platforms, and social media, legal information can be made more accessible, engaging, and inclusive. The study highlights case examples where ICT has been successfully implemented to bridge the gap between legal systems and the public, enhancing both knowledge and participation. Challenges such as digital literacy and infrastructure gaps are also discussed, with recommendations for future development. Ultimately, this paper demonstrates that ICT4D holds significant potential to revolutionize legal education and empower communities through technology-driven legal awareness.

Raghdha Awad Shaban Naseri, et.al.[6]. This study assesses the legal information needs and access challenges faced by lawyers in Uganda. It explores the types of legal resources most commonly sought by legal professionals and the barriers they encounter in accessing them. The research highlights that while lawyers require a wide array of up-to-date materials such as statutes, case law, and legal commentaries, they often face significant hurdles, including limited access to digital databases, outdated print resources, and inadequate internet connectivity, particularly in rural areas. Additionally, the study examines the role of law libraries, online platforms, and legal databases, assessing their effectiveness in meeting these needs. Findings reveal a pressing demand for more robust and accessible legal information infrastructures to support the legal profession in Uganda. The research calls for policy reforms, increased investment in digital legal resources, and enhanced information dissemination strategies

to improve access and ensure that lawyers can adequately serve their clients

Nephropathy K., et al.[7]. The integration of Artificial Intelligence (AI) and Machine Learning (ML) in legal practice has transformed how lawyers and legal professionals manage and interpret vast amounts of legal data. This review explores current approaches and methodologies used to develop AI-powered legal assistance tools, focusing on their capabilities in case analysis, contract management, legal research, and predictive analytics. By examining advancements in natural language processing (NLP) and AI-driven automation, this paper highlights how these technologies streamline routine legal tasks, improve decision-making, and enhance efficiency. The review also discusses ethical concerns, such as data privacy and bias, which are critical in legal AI applications. Furthermore, it evaluates the challenges and potential of AI-augmented tools in transforming the legal profession. As AI and ML continue to evolve, this paper aims to provide a comprehensive overview of their role in shaping the future of legal assistance.

Pooja Bahuguna, et al.[8]. Legal awareness is critical for fostering informed and responsible citizenship, especially among the youth who will shape the future. This empirical study examines the level of legal awareness among college students, focusing on their understanding of basic rights, legal responsibilities, and access to legal resources. Conducted across various institutions, the research uses surveys and interviews to assess students' knowledge of legal principles related to civil rights, criminal law, and social justice issues. Key findings highlight gaps in awareness, with many students demonstrating limited understanding of essential legal concepts despite high exposure to legal issues in daily life. The study also identifies factors influencing legal awareness, such as educational background, socio-economic status, and access to legal education. The results emphasize the need for integrating legal literacy into the academic curriculum to better equip youth with the tools to navigate legal systems and contribute to an informed society.

Mohammad Nazmul Alam, et al.[9]. This study explores the level of awareness among young women regarding key legal acts that directly impact their rights and protection. The research aims to assess their understanding of laws related to personal safety, workplace equality, domestic violence, and gender discrimination. It investigates the sources from which young women obtain legal knowledge, including educational institutions, social media, and community initiatives. The study also examines the correlation between legal awareness and socio-economic factors such as education, urban or rural background, and access to legal resources. Through surveys and interviews, the research identifies gaps in knowledge and highlights the need for better dissemination of legal information among young women. The findings emphasize the importance of targeted legal education programs to empower young women, ensuring they are well-informed of their rights and the legal mechanisms available to protect them in various aspects of their lives.

Marc Quadpot, et al.[10]. This paper explores the potential of legal chatbots to enhance access to justice by providing affordable, efficient, and easily accessible legal information and services. As traditional legal systems often present barriers for many individuals such as high costs, complex language, and lengthy processes, chatbots offer a transformative solution. By utilizing artificial intelligence, these virtual assistants can guide users through legal queries, assist in document preparation, and provide real-time support in multiple languages, ensuring that a wider audience can access vital legal resources. This study examines existing chatbot models, their effectiveness in various legal contexts, and user satisfaction levels. Additionally, it highlights the challenges and ethical considerations associated with implementing chatbots in the legal field. Ultimately, this paper argues that legal chatbots can play a crucial role in democratizing legal assistance, fostering a more inclusive justice system for all. Kaushik

Shahin Kabir, et al. [11]. This paper explores the transformative impact of artificial intelligence (AI) technology on legal research and decision-making processes. As the legal field increasingly embraces AI tools, the efficiency and accuracy of legal research are significantly enhanced. AI algorithms streamline the search for relevant case law, statutes, and legal precedents, allowing legal professionals to access vast amounts of information quickly. Furthermore, AI-driven analytics aid in predicting case outcomes and informing strategic decisions, thereby optimizing legal strategies. This study examines various AI applications, including natural language processing and machine learning, highlighting their potential to reduce human error and improve legal service delivery. By analyzing current trends and case studies, the paper emphasizes the necessity for legal practitioners to adapt to these technological advancements to remain competitive. Ultimately, the integration of AI technology into legal research and decision-making not only revolutionizes traditional practices but also shapes the future of the legal profession.

Mattia Fonisto , et al. [12]. This paper presents An Intelligent Conversational Agent for the Legal Domain, a cutting-edge tool designed to enhance accessibility to legal information and support. Leveraging advanced natural language processing and machine learning algorithms, the agent provides users with instant, accurate responses to

a wide array of legal inquiries, from basic rights to complex regulations. The system is tailored to accommodate diverse user needs, including multilingual support, ensuring that individuals from various backgrounds can benefit from its capabilities. By simulating human-like conversations, the agent not only delivers legal information but also engages users in a manner that promotes understanding and retention. This innovation aims to reduce the barriers associated with traditional legal consultation, empowering users to navigate the legal landscape confidently. Ultimately, this conversational agent represents a significant step toward democratizing legal knowledge and fostering a more informed society

III. METHODOLOGY

The methodology for developing Legal Compass, a virtual legal advisor chatbot, involves a structured approach integrating natural language processing (NLP) with legal data to offer accurate, multilingual legal information. Initially, extensive research is conducted to identify common legal queries from various jurisdictions, ensuring the chatbot covers a wide spectrum of legal topics. Legal documents, statutes, and case law are then digitized and fed into a legal database, which is continually updated for accuracy. NLP algorithms are employed to enable the chatbot to understand and interpret legal language in multiple languages, ensuring user-friendly communication. The chatbot is trained using supervised learning, with datasets composed of frequently asked legal questions and corresponding legal references. Advanced machine learning models ensure that the chatbot not only answers direct queries but also provides context-based legal advice tailored to users' specific situations. A feedback mechanism is implemented, allowing users to rate the chatbot's accuracy, thus improving its performance over time. Security and confidentiality are central, with strong encryption methods applied to safeguard user data

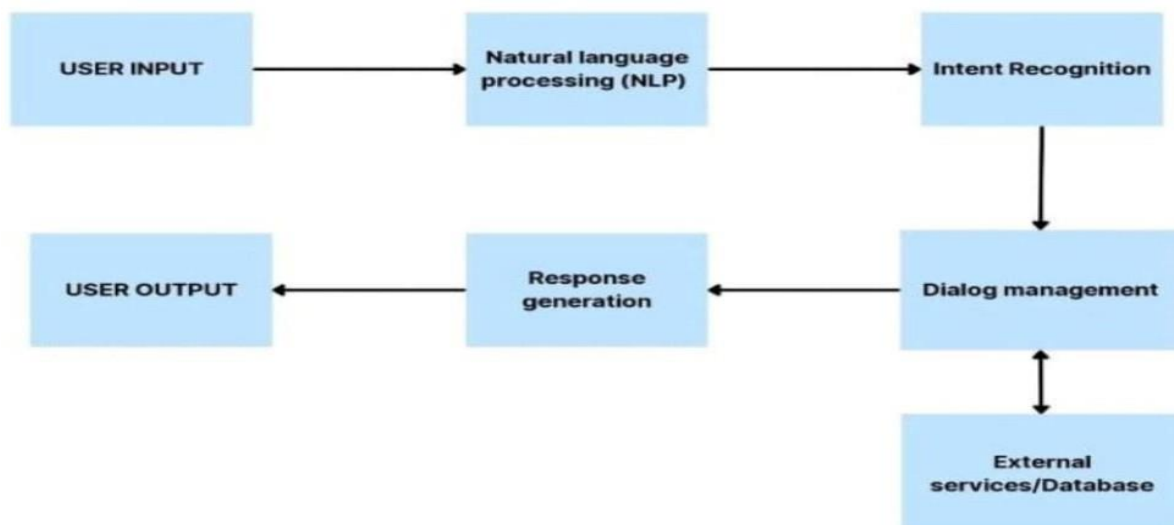

Figure 1: Block diagram of digital assistant chatbot

This diagram illustrates the flow of a typical conversational AI system. User input is processed through Language Processing (NLP) to understand the intent, which then guides the dialog management and response generation. The system may interact with external services or databases to provide relevant information before delivering the final output to the user. uses algorithms like Support Vector Machines (SVM) or deep learning models (e.g., BERT) to classify the user's intent. Dialog Management leverages Finite State Machines (FSM) or Reinforcement Learning (RL) to decide the next action based on the recognized intent, potentially accessing External Services/Databases via APIs. Response Generation then uses template-based or neural models (e.g., transformers) to create a reply, which is sent back as the User Output.

IV CONCLUSION

In conclusion, legal awareness is paramount in fostering a just and equitable society. It empowers individuals to understand their rights and responsibilities, enabling them to navigate the complex legal landscape more effectively. Furthermore, legal awareness promotes social cohesion and the rule of law, reducing the prevalence of injustice and human rights violations. Through education and outreach programs, governments and organizations can enhance legal awareness, ultimately leading to a more informed and engaged citizenry. This, in turn, contributes to a more democratic and accountable society, as well as a better understanding of the legal system and its role in preserving individual liberties and maintaining order. Legal awareness is an essential cornerstone of a fair and equitable society.

Acknowledgements

We would like to express a deep sense of gratitude towards our guide Prof. Sunita Naik, Department of Computer Engineering for her constant encouragement and valuable suggestions. The work that we can present is possible because of her timely guidance. We would like to pay gratitude to the panel of examiners for the time and effort they put in evaluating our work and their valuable suggestions time to time. We would like to thank Project Head of the Department of Computer Engineering, Prof. Kirtida Naik for her support and co-ordination. We would like to thank In-Charge Head of the Department of Computer Engineering, Prof. Sunita Naik for her support and co-ordination. We are also grateful to the teaching and non-teaching staff of the Department of Computer Engineering who lend their helping hands in providing continuous support.
