

VIVA Institute of Technology aligns with AICTE and University of Mumbai standards to create a well-equipped educational environment that meets the needs of all its students. The institute places a high priority on maintaining and continually upgrading facilities, which include classrooms, laboratories, a comprehensive library with reading spaces, a web browsing center, parking, and a canteen. To accommodate curriculum changes, the institute regularly enhances its infrastructure to support both academic and extracurricular activities effectively.

Each department is provided with the required number of classrooms, tutorial rooms, and laboratories to host a wide range of academic activities. Classrooms are well-ventilated, and equipped with boards, LCD projectors, and Wi-Fi connectivity to support ICT-based teaching and learning. Additionally, laboratories are fully outfitted with necessary experimental setups, whiteboards, and provisions for portable projectors as needed. Each laboratory also displays essential information and guidelines for use.

In the library, a dedicated internet resource center is available for both students and teachers, complemented by well-equipped tutorial rooms. The institute also provides specialized facilities, including a drawing hall, a workshop, and seminar halls with ICT support. The Computer Centre is updated with the latest software. E-learning resources, such as computer-based and virtual lab learning tools, are also available, and the central library houses extensive resources for self-study. Separate common rooms for boys and girls ensure a comfortable environment for all students.
